

# How to use the CallNow feature

Applies to VoipNow 3 and higher!  
The CallNow Feature was removed in VoipNow 5.5.0.

The CallNow feature allows any internet user to contact your extension, and this article explains how to configure it.

## Step-by-step guide

**STEP 1:** Open the extension's management page and click the **CallNow** icon in the **Quick Links** section.

By default, CallNow is disabled and , the page looks as shown below.

### CallNow Preferences for Extension Antonio Meucci (0003\*004)

**Warning:** The **CallNow** feature is not activated. To use **CallNow** with your extension, you should activate and configure it.

#### Allow CallNow

Allow people to call me

**STEP 2:** Once you select the **Allow people to call me** checkbox, the following page will be displayed.

#### Allow CallNow

Allow people to call me

CallNow ID \*

eda29a5609010164

I am available only in time interval \*

Anytime ▼

Do not allow people to contact me while I am on the phone

Confirmation required before connecting me to caller

Show my name on the public CallNow interface

Ask for the name of the caller

Use image validation on the public interface

Language \*

English ▼

Message on the public interface

Write your number below and I will call you in several seconds. Thank you!

**STEP 3:** In the **CallNow Preferences** page, customize the options available following the explanations below:

- **Allow people to call me:** Enable calls to be originated from the web interface using Call API and CallNow.
- **CallNow ID:** The identification string to be added to the server's URL. It is automatically generated by default, but you can change it if required. However, you need to make sure the new ID is unique on the server.
- **I am available only in this time interval:** Choose the time interval you allow calls through the web interface.
- **Do not allow people to contact me while I am on the phone:** Do not allow calls through the web interface when another call is in progress.

- **Confirmation required before connecting me to caller:** When the call is connected to the extension, the system asks you to confirm the call by pressing 0.
- **Show my name on the public CallNow interface:** Show the name of the extension owner in the web page.
- **Ask for the name of the caller:** Ask the caller to enter their name in the web interface.
- **Use image validation on the public interface:** Ask the caller to validate their entry by filling in the numbers/characters shown in a automatically generated image.
- **Language:** Select the language for the web interface.
- **Message on the public interface:** The message that the caller will see in the interface.

**STEP 4:** When done, click **OK** and the server will generate an URL as follows:

```
http://server_ip_or_domain_name/callnow/the_id
```

With this URL, any Internet user can contact your extension. The user will only need to enter their name and phone number on the public **CallNow** interface

When the request is made, your extension will ring and, as soon as you pick up, it will connect you to the person calling.
