Release Notes

The scope of the Release Notes is to inform you about the:

- The changes performed in a specific version of VoipNow (improvements and bug fixes).
- What you should know before performing an upgrade to a specific version of VoipNow.

It is absolutely required to understand the release notes before performing the upgrade on a production infrastructure.

Let's Start!

We invite you to review the following resources:

- Important Upgrade Notes - the changes that have been tagged as "very important" by the VoipNow Product Management Team because they might affect existing customers.
- Release Notes - the full list of changes that occurred in the product from a public release to another.

Once again, make sure that you understand the impact of these changes before performing the upgrade. If you have any doubts or concerns, do not hesitate to open a ticket in the 4PSA Support Zone.
