	Fixed status check for extensions contacted from CallNow.	-	VNP-48546
	Fixed error on image validation with CallNow function.	-	VNP-48541
	Fixed the channel prefix so that it applies for outgoing calls.	-	VNP-48523
	Fixed licenses errors with license keys issued by Parallels.	-	VNP-48519
	Fixed potential SIP server crash caused by the global list of configs being empty during initialization of a child process.	PXW-875737	VNP-48512
	Fixed an issue in libs3 caused by 100 Continue header during PUT requests, resulting in HTTP statuses being ignored.	TKO-711680	VNP-48508
	Response class of the HTTPClient package is now included manually as it does not respect naming conventions.	-	VNP-48490
	Fixed server_args in tftp config.	-	VNP-48481
	Fixed channel re-enable for channels missing nodeId configuration.	-	VNP-48477

	Fixed libresolve appending local hostname while trying to resolve a domain name from a list of DNS servers.	-	VNP-48473
	Using <code>move</code> instead of <code>copy</code> in <code>astsync</code> to avoid invalid configs on machines without sufficient disk space.	-	VNP-48463
	Fixed phone language fallback in voicemail.	-	VNP-48457
	Made SIP loadbalancer timeouts smaller to avoid issues on single node deployments.	-	VNP-48451
	Fixed wrong contact IP and port settings for extensions behind NAT without fixed IP.	-	VNP-48447
	Fixed fax notifications that were not sent on servers upgraded from VoipNow 2.5.	-	VNP-48443
	Fixed call timeout when Call Interactive is used in an IVR.	-	VNP-48441
	Fixed storage limit for voicemail on upgrade.	-	VNP-48437
	Fixed SQL errors in groups assign process.	-	VNP-48435
	Fixed IVR access of options # and * (error occurred and options could not be edited).	ZCA-148099	VNP-48429
	Header <code>From</code> is now correctly set for OPTIONS in NAT infrastructure.	-	VNP-48414
	Fixed several issues in language utils with merging translations and character encoding.	-	VNP-48412
	<code>srvmonitor</code> is disabled during upgrade to prevent services from restarting with invalid configs.	-	VNP-48396
	Fixed potential Distributed database safety dump when errors occurred during the process.	-	VNP-48360
	Fixed voicemail notification set from email templates not to be sent if the user's email address is missing.	-	VNP-48354
	All dates returned and set by UnifiedAPI use the timezone of the authenticated user.	-	VNP-48105
	Fixed error in call report export procedure.	AWQ-484890, ACB-513916	VNP-48029
	Call Interactive answers IVR calls if the call was not already answered.	-	VNP-48600
	Non-printing chars removed from AJAX calls.	WLE-674897	VNP-47689
	When calling multiple targets, we treat 183 as 180 to avoid ringing problems.	-	VNP-45428
	Fail reason saved for failed auth due to invalid credentials.	-	VNP-48483
	Added <code>/var/lib/asterisk</code> path to back up procedures.	XUK-683885	VNP-48616
