

Organization's Outgoing Routing Rules

This page contains instructions on how to block outgoing calls during a specific time interval or for a particular CallerID.

- [Overview](#)
- [Controls](#)

Overview

The **Outgoing Routing** option allows organizations to block certain outgoing calls, taking into consideration the time interval during which the call was dialed and the CallerID of the system user that placed the call.

Controls

The **Outgoing Routing Rules Groups Management** page contains controls with the help of which, organizations can:

- [create](#) a new group
- [search](#) for certain groups
- edit one of the existing groups
- [save](#) the routing rules groups
- [remove](#) unused groups

For a full description of this functionality, read the [Manage Outgoing Routing](#) chapter.
