Features Enhancement Resolved

### DNS Manager 3.7.0 release 100427.01

Issue	Details	Key
	The zone serial management can now be performed from the web interface	
	The zones export scripts (bind_export.sh, dnsmanager_export.sh and plesk_export.sh) now export the zone serial value as well	
	Added support for SOA serial import for master zones.	
	The Global Transfer IPs now support networks.	
	SRV records support target in subdomains.	
	Improved interface and usability	
	New SRV Service and Protocol can be added by server admin with a SQL query	
	The Slave Reverse and the Slave IDN Forward zones' records are now correctly displayed in the interface.	
	The client.sh script now accepts the --state option.	
	The Check Name Servers options can now be used to verify the name servers for IDN zones as well.	
	Fixed Ensim export script for master zones.	
	Several SOAP API issues fixed	

## Known Issues

There are no known limitations in DNS Manager 3.7.0.
