Access Management

Authentication method

A third party App that uses SystemAPI must:

- register with VoipNow
- obtain authorization from the user

Once the App has been authorized, requests must contain the SOAP message header and the authentication data.

Please note that you must pass only the token, without placing the word "Bearer" in front of it.

```
<SOAP-ENV:Header>
        <ns3:userCredentials>
                <accessToken>1|n_xOgmCNHc_KLnvOh0T_N8yGM8sX.p05|1|1343822097|5_GddMUkkq~NSOkxPrI~GHTtLRXB~qO2<
/accessToken>
        </ns3:userCredentials>
</SOAP-ENV:Header>
```
