

Directory Layout

This page describes the directory layout of a VoipNow skin.

- [Folder Tree](#)
- [Directories](#)
 - [Global CSS](#)
 - [Skin Related CSS](#)
- [Style Areas](#)

Folder Tree

The folders that define a VoipNow skin have the following structure:

```
css\  
    buttons.css  
    error.css  
    graphics.css  
    layout.css  
    left.css  
    top.css  
    vn.ui.css  
skin_name\  
    css\  
        top.css  
        left.css  
        main.css  
    icons\  
    images\
```

Directories

Skin files are organized in two directories.

Global CSS

It contains several css files.

- The **layout.css** file - a global file for layout styles used by all skins.
- The **top.css** file - layout information for the top area (above the menu).
- The **left.css** file - layout information for the menu area.
- The **buttons.css** file - global file with all buttons used in the application; used by all skins.
- The **vn-ui.css** file - global file with style for some jQuery widgets.
- The **graphics.css** file - global style information for charts used throughout VoipNow.
- The **error.css** file - all style information for error pages

Skin Related CSS

It contains three CSS files, which are used only by the related skin.

- The **top.css** file is for the top area of the page (above the menu).
- The **left.css** file is for the menu area.
- The **main.css** file is for the rest of the page including custom layout formatting (position, aligning, floating), custom page elements formatting (borders, text colors, background colors, background images, character formatting, etc.).
