Set Up System Preferences

About System Preferences

VoipNow comes with a series of preferences that you can customize in order to define how the platform should behave. All these preferences are grouped under the **Zero Priority** area, which you can access from **Unified Communication Settings**.

Using the **Zero Priority** options, you can define call-related conditions and charging, customize the fax service, set SIP-related preferences, monitor VoipNow services, enable VoipNow Automation, and set integration preferences.

- Set Fax Preferences
- Set Charging Preferences
- Set Monitoring Preferences
- Set Integration Preferences
- Set General Preferences
- Set SIP Preferences
