

VoipNow UnifiedAPI

Through UnifiedAPI, developers can manage phone calls and get related statistics, send faxes as well as administer extensions.

- [About UnifiedAPI](#)
- [UnifiedAPI services](#)

About UnifiedAPI

The UnifiedAPI allows you to query data about existing phone calls, call detail records, information about extensions. It also allows you to accomplish complicated stuff like initiating, parking or transferring calls or even managing agents of a queue.

Because it is REST based, it enables you to develop applications fast and easily test basic features like initiating calls.

Base URL

All REST URIs are relative to the following BASE URLs:

```
https://<hostname>/uapi/ or https://<hostname>/uapi/
```
