

How to check if an extension is registered

Applies to VoipNow 3 and higher!

VoipNow uses Kamailio for the extension registration process. However, you can also use the `sip show peers` Asterisk command to check your IP, as well as the port of your extensions. If an extension is listed, then it is either registered or set up with a static IP port. This article describes how you can check the extensions registered in the system.

Before you start, make sure that the following requirements are met:

- You have a VoipNow 3 or higher.
- You have access and basic knowledge for using a SSH client (e.g. Putty).

Step-by-step guide

Please note that the Asterisk `sip show registry` command will not provide any information on registered extensions!

Kamailio stores the information about the registered extensions in Hubring. To find out the extensions currently registered, please do as follows:

STEP 1: Using your favorite SSH console (e.g.: Putty), connect to Hubring:

```
hr-cli -dp `cat /etc/voipnow/main.conf | grep DIS | awk -F':' '{print $3}'` -n 10 -h `cat /etc/voipnow/disdbase.conf | grep DIS | awk -F':' '{print $4}'`
```

STEP 2: Once you are connected to the Hubring server (you will get the Hubring prompt: `hubring <HubringHost>:11211[10]> .`), you can use the following commands to see the registered extensions:

```
keys rtl:sipses:ext:*:*
```

This command will print the Hubring key for all the registered extensions. You will see something like this:

```
hubring 10.150.12.43:11211[10]> keys rtl:sipses:ext:*:*
1) "rtl:sipses:ext:0003*001:r1RZH9CI/E+ldalBu+cYRXqexgE="
2) "rtl:sipses:ext:0003*008:eGH3b5ygmnh3Y+xcAlNSQ7p6fWE="
3) "rtl:sipses:ext:0003*004:GmadgY7HmzHJQxjxHKTmbWT0XiU="
4) "rtl:sipses:ext:0003*001:bjLE1jDmQ5bwsb+6wMT16xjBCrU="
```

If you like to see find out all the SIP session information for a certain extension you can run.

```
hubring 10.150.12.43:11211[10]> hgetall rtl:sipses:ext:0003*001:r1RZH9CI/E+lda1Bu+cYRXqexgE=
1) "u"

42) ""
```

The registered extensions can be checked from the VoipNow interface as well. Depending on your account, you have access to the following information:

- The system administrator can view all the extensions in the system and their registration status from the **Extensions Management** page. The **State** column displays the current status of the phone terminal connected to the extension.
- The service providers can check the registration status for the Phone terminal extensions defined for all their client accounts on the Extensions Management page.
- The organizations can check the registration status for all their Phone terminal extensions on their home page.
