

VoipNow Deprecating Notice

This document contains the list of features, technologies, and functions that have been or will be deprecated in VoipNow.

- [IAX Channels](#)
- [Inband DTMF Signaling](#)
- [TFTP Protocol](#)
- [Peer Certificate Validation](#)
- [Cepstral Based TTS](#)
- [XMPP protocol](#)
- [OpenID](#)
- [CallNow](#)
- [Automation](#)

Deprecating	Version	Notes
IAX Channels	3.7.0	<p>The protocol has never gained wide-industry adoption and, according to our research, a very limited number of VoipNow customers use IAX in production. Furthermore, IAX is currently not supported in distributed VoipNow installations.</p> <p>If you do use IAX, please change to SIP as soon as possible to avoid any service disruption.</p>
Inband DTMF Signaling	3.7.0	<p>Inband is highly unreliable and was introduced for old equipment that did not support RFC2833.</p> <p>In the unlikely event of having endpoints configured to use inband, please switch to RFC2833.</p>
TFTP Protocol	4.0.0	<p>TFTP is used for provisioning by a very low number of old phone hardware. The protocol is insecure and has been removed.</p> <p>We recommend phones that can be provisioned over HTTPS.</p>
Peer Certificate Validation	4.0.0	<p>We enforced strict validation for certificates. This means that:</p> <ul style="list-style-type: none">• a hostname must be assigned to all VoipNow services• CA signed certificates must be installed <p>When multiple Web Management Interface nodes are used, this must be done at the load balancer level.</p>
Cepstral Based TTS	4.1.0	<p>The TTS quality of the third-party Cepstral TTS has been surpassed by other third-party technologies.</p> <p>We will add a new TTS engine based on cloud services.</p>
XMPP protocol	5.2.5	<p>We replaced XMPP with DataChannel - a modern, low latency messaging layer that uses WebSockets as a transport protocol.</p> <p>Use Hubgets web, mobile clients or the DataChannel API.</p>
OpenID	5.2.5	<p>OpenID usage has been shrinking, with many providers dropping support for it.</p> <p>We added Google Login and we will continue to integrate with other popular authentication layers.</p> <p>Existing OpenID accounts will continue to work until 15 March 2018, when we will remove the OpenID authentication support.</p>
CallNow	5.3.0	<p>CallNow is a legacy implementation of web contact and has been surpassed by Hubgets Page.</p> <p>Use Hubgets Page to achieve web communication on phone and chat.</p>
Automation	-	<p>We've noticed that over 95% of our customers integrate VoipNow API with custom or commercial provisioning and billing solutions.</p> <p>Due to this reason, we prefer to focus on improving APIs to provide more efficient management and billing solutions.</p> <p>All VoipNow versions shipped after 15 March 2018 will not include Automation anymore.</p>
