

Diagnostic Extension

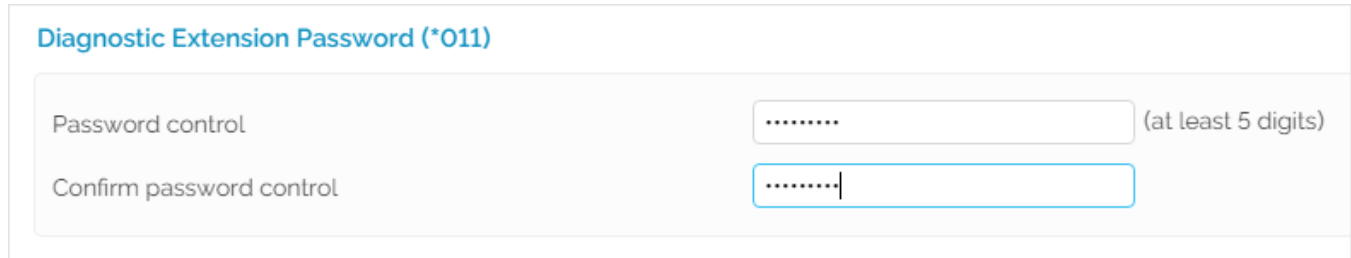

This page describes how to set up the Diagnostic Extension feature so that it work from your phone keypad.

- [Overview](#)
- [Set up the extension](#)
- [How to use the diagnostic extension](#)

Overview

The **Diagnostic Extension** is a special extension that allows the system administrator to find out details about several server parameters.

Set up the extension

A screenshot of a web form titled "Diagnostic Extension Password (*011)". The form has a light gray background. It contains two rows of input fields. The first row is labeled "Password control" and has a text input field with a masked password "....." followed by the text "(at least 5 digits)". The second row is labeled "Confirm password control" and has a text input field with a masked password "....." and a vertical cursor at the end.

*Screenshot: The Diagnostic Extension Password (*011) section from the Zero Priority page.*

The Diagnostic Extension Password (*011) can be enabled server-wide from the **Unified Communications Zero Priority Monitoring** tab. Fill in the **Password control** field, confirm it, then press **OK**.

How to use the diagnostic extension

To access this extension, dial ***011**. You will be asked for the password that you have set earlier.

VoipNow will announce the values of the following parameters:

- The server load within the last 5 minutes
- The existence of binary registered channels and binary calls in progress
- The Asterisk uptime
- The system uptime
- The used memory and the free memory
