

# Presence Resource

This page describes the representation of the resources used by the Extension Presence Service.

## Presence resource

The presence information for an extension is represented by the UnifiedAPI as a Presence resource. It contains the agent where the extension is registered and the expiration date of the registration.

## JSON representation

The following example contains the Presence in JSON representation. All fields are fictitious.

```
{
  "status": "0",
  "extension": "0003*001",
  "registration": [
    {
      "agent": "3CXPhone 5.0.14439.0",
      "registration": "-1",
      "expire": "2011-02-10T15:10:55Z"
    }
  ]
}
```
